

Question ID:- 305

LH releasing factor and FSH releasing factor are secreted by which among the following options?

LH रिलीजिंग फैक्टर और FSH रिलीजिंग फैक्टर निम्नलिखित विकल्पों में से किसके द्वारा स्रावित होते हैं?

Options:-

Best Records

•The hypothalamus / हाइपोथैलेमस, Option ID :- 1219 ,

•The Iris / आइरिस, Option ID :- 1220 ,

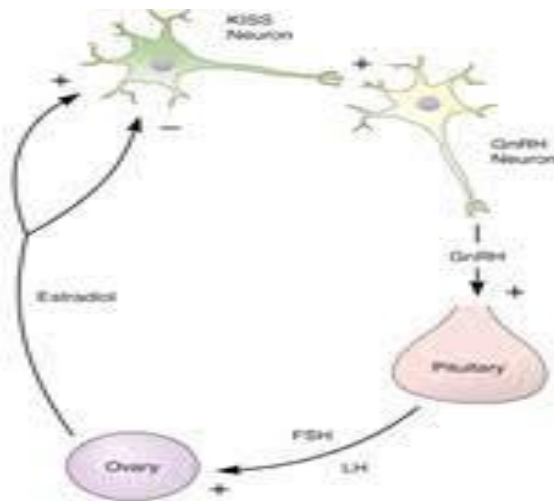

•The pituitary / पीयूष ग्रंथि, Option ID :- 1217 ,

•The vein / नसों , Option ID :- 1218,

Correct Answer :- The pituitary / पीयूष ग्रंथि, Option ID : -1217

Expert's View

“In adult males and females, the hypothalamic pulsatile secretion of the GnRH results in the expression and release of follicle-stimulating hormone (FSH) and luteinizing hormone (LH) from the anterior pituitary gland.”

<https://www.sciencedirect.com/topics/biochemistry-genetics-and-molecular-biology/gonadotropin-releasing-hormone>

Therefore, the answer key is changed to **Pituitary gland.**
